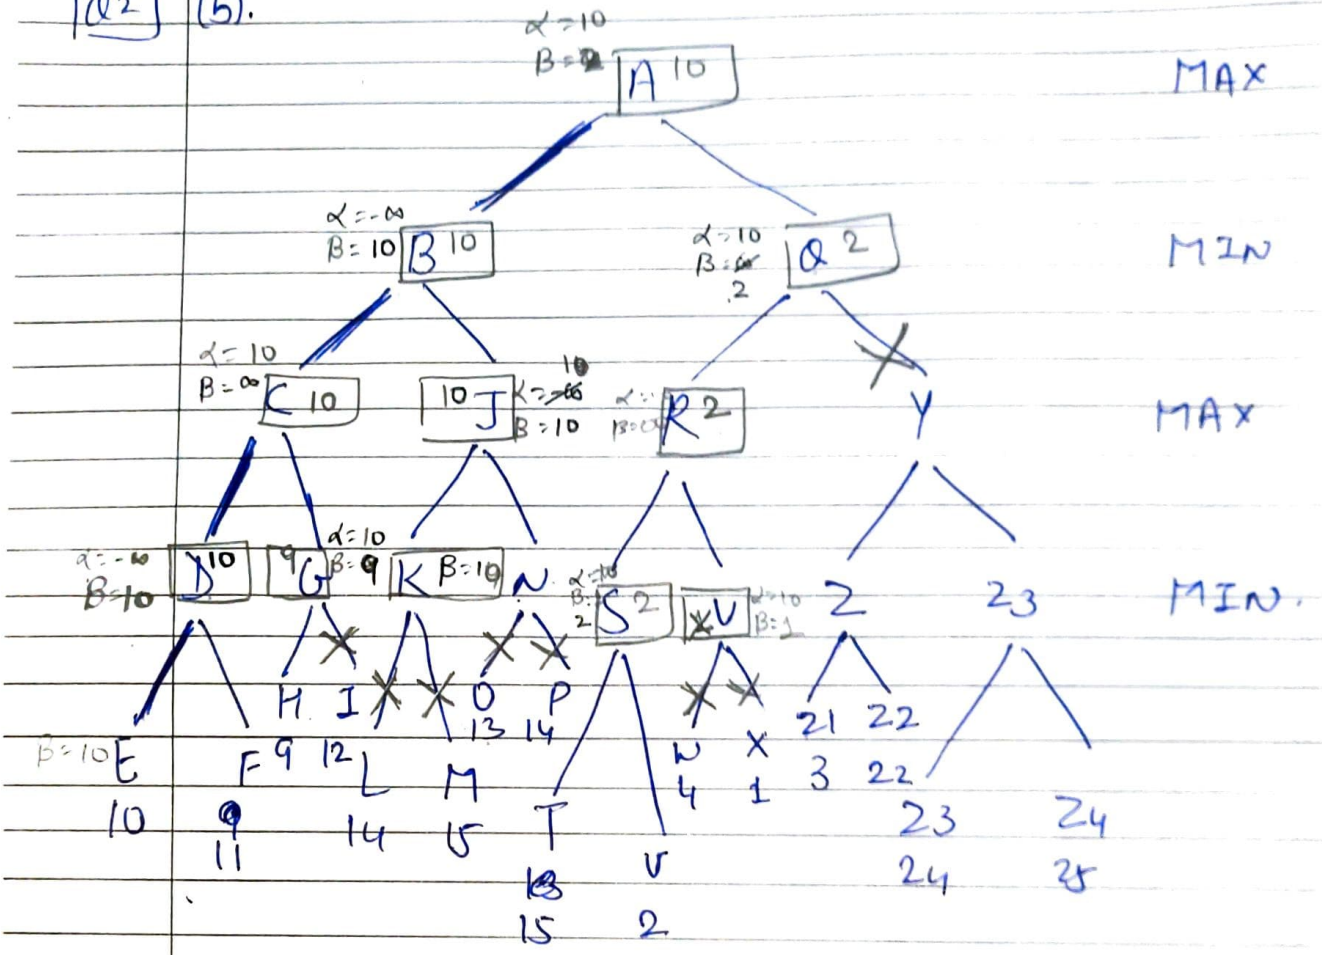
Q2 (b).



— As the initial stage $\alpha = -\infty$ & $\beta = \infty$ & Condition is $\boxed{\beta <= \alpha}$

— So the Root node $\boxed{A = 10}$ & the ~~is~~ the alpha cut

→ The paths. $\boxed{A \rightarrow B \rightarrow C \rightarrow D \rightarrow E}$

Q2 (C)

→ Cut Predicate.

- It removes all the alternatives & then forbid the values otherwise, it could be binding.
- The Symbol for cut predicate is "!".
- Eg.,

```
a(x) :- b(x), !, c(x).
a(x) :- d(x).
b(1).
b(4).
c(1).
c(3)
d(4).
```

→ Fail Predicate.

- The whole Statement is going to be false. It will force the backtracking in an attempt to unify another clause.

Eg,
```
a(x) :- b(x), c(x), fail.
a(x) :- d(x).
b(1).
b(4).
c(1).
c(3).
d(4).
```

- Not Predicate.

- The negative predicate in prolog is \+ & therefore \+ return True.

- It is the negation Predicate. Symbol is <> in Prolog.

- eg,

~~[illegible]~~

a(x):- (x <> 3), ~~print~~ write(x)

Q3 (a).

(1) For every mall, there is some Santa who is at mall.

~~$\forall x, \forall y$~~ ~~for~~, ~~$\exists y$~~

$\forall x, \exists y :- mall(x,y) \rightarrow Santa(y)$.

(2) Every child who visits anywhere talks with every Santa who is at the plaud visited.

$\forall z$

$\forall x, \exists y (Child(x) \rightarrow Visit(y) \wedge Santa(z) \rightarrow plau(y))$

(3) Every child who is a child visit some mall

$\forall x, \exists y :-$ ~~$Visit(x,y)$~~ $Child(x) \rightarrow mall(x,y)$.

(4) Every child who is good or who talks with some Santa get some toy.

$\forall x, \exists y \exists z :- (good(x) \vee talks(y)) \rightarrow gets(z)$
